

✓ No cost to you

It's free.

Umbrelly costs you nothing — there's no subscription, no setup fee, and no charge on your savings.

? How does that work

We're paid by AWS, not by you

We monetise through a **small percentage we receive from AWS**. AWS does this to keep customers happy and their cloud costs optimised — so you have **no reason to switch** to GCP, Azure, or any other competitor.

AWS benefits too

Because you bill through Umbrelly, we take on the overhead to **aggregate invoices, handle support, and reduce collection risk**. That's real value for AWS — which is why they're happy to share a slice.
